

Lincoln Private Market Index

February 11, 2025

Introduction

The Lincoln Private Market Index (“Lincoln PMI”), formerly known as the Lincoln Middle Market Index, measures the changes in aggregate enterprise¹ fair value² of sponsored (i.e., private equity owned) private companies in the United States. While the private market continues to emerge as a distinct asset class, there remains little visibility into the performance, specifically enterprise values, of the sponsored private market. Lincoln International’s (“Lincoln”) Valuations & Opinions Group (“VOG”) compiles the Lincoln PMI based on the population of companies fair valued every quarter.

VOG collaborated with Professor Steven Kaplan and Professor Michael Minnis of University of Chicago Booth School of Business to create the index. Lincoln has created the first enterprise value index of privately owned companies. Other indices assessing U.S. private companies are either based on changes in accounting data, such as revenue and/or earnings, or based on survey data. The Lincoln PMI is the first index that is based on fair value accounting and valuation principles. Therefore, we believe the Lincoln PMI is comparable to major U.S. indices while being reflective of U.S. private companies, a key driver of aggregate economic performance and U.S. employment, while offering timely insight to stakeholders and investors.

Source of Data

On a quarterly basis, VOG determines the enterprise value for approximately 5,750 portfolio companies from a wide assortment of private equity investors and non-bank lenders. The portfolio companies are required to report quarterly financial results as well as other important strategic, operating, and financial information. VOG reviews this information in determining each portfolio company’s quarterly enterprise value.

In assessing enterprise value, VOG relies on commonly accepted valuation methodologies such as the market approach and income approach driven by each portfolio company’s historical performance, projections, and set of selected public companies. Thus, each valuation analysis is unique and conforms to fair value accounting principles. The analyses are then vetted by auditors, fund managers and their board of directors, as well as other regulators. Upon concluding each quarterly valuation cycle, VOG aggregates the underlying financial performance and enterprise value data for analysis.

Sample Size and Criteria

Every quarter, VOG begins the valuation process by computing the enterprise value for each individual portfolio company based on its underlying (i.e., historical) financial performance, expected future performance, a customized set of selected public companies and precedent M&A transactions, as well as additional relevant strategic, operating and financial information.

The next step is to exclude: (a) companies with EBITDA greater than \$250.0 million; (b) non-operating companies such as passive real estate or specialty finance companies; (c) early stage venture businesses, (d) companies in financial distress, and (e) public companies.

Given the large number of companies valued on a quarterly basis, confidentiality of all company-specific information is maintained and, similarly, no company can individually bias the index.

¹ Enterprise value is the sum of the fair value of a company’s equity and interest-bearing debt net of excess cash; for purposes of this paper, references to enterprise value refer to enterprise fair value

² Under U.S. generally accepted accounting principles (specifically, ASC 820) fair value is defined as: “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.”

The final step is to construct the index based on those companies meeting the above criteria (i.e., the index constituents).

Index Calculation

Based on generally accepted accounting principles and business valuation standards, Lincoln determines the enterprise value of each company. The generalized formula for determining enterprise value of any company at any moment in time, whether applying the income approach, market approach and/or asset approach is as follows:

$$Company\ Value_t = \frac{Benefit\ Stream}{Discount\ Rate - Growth\ Rate}$$

Based on the concluded enterprise value of each constituent, the index value for any given period is calculated as follows:

$$Lincoln\ PMI_t = Lincoln\ PMI_{t-1} \times (1 + Lincoln\ PMI_\Delta)$$

Where:

Lincoln PMI_Δ is the quarterly change of the Lincoln PMI

Lincoln PMI₀ is the initial index value which is arbitrarily set to 10,000

The quarterly change in the Lincoln PMI would be the sum of the changes in enterprise value of each constituent multiplied by the weight of each constituent, or:

$$Lincoln\ PMI_\Delta = \sum_i \left(\frac{EV_{i,t}}{EV_{i,t-1}} - 1 \right) \times \frac{EV_{i,t-1}}{\sum_i EV_{i,t-1}}$$

Where:

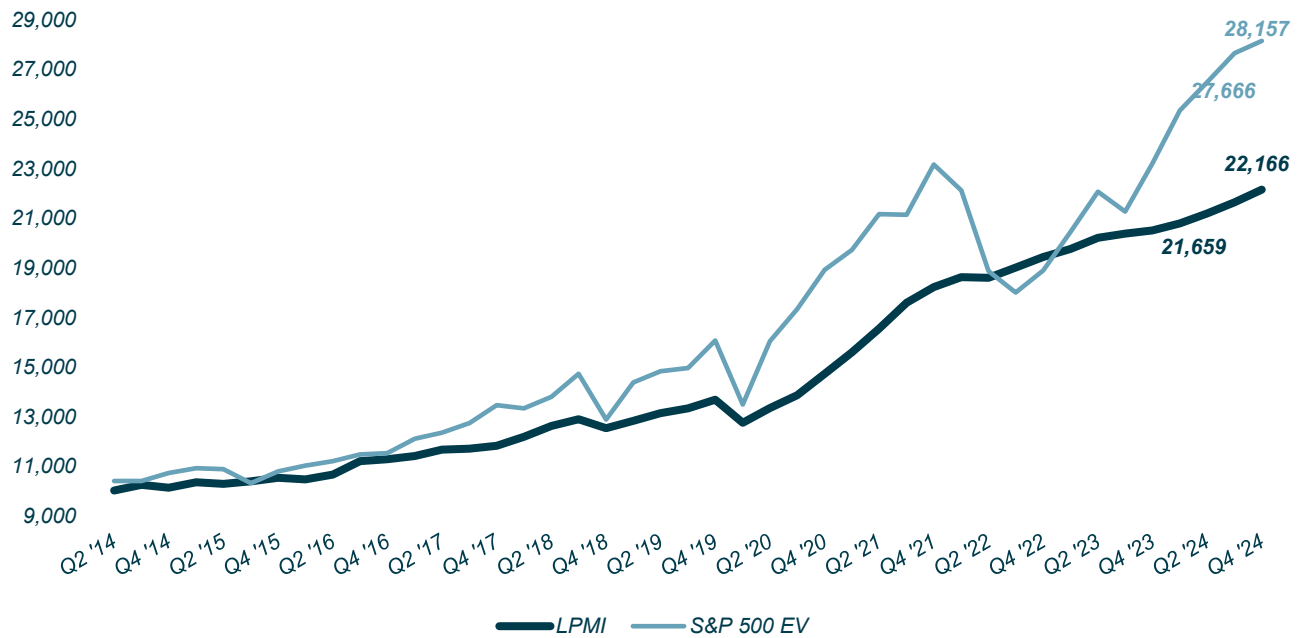

EV_i is the enterprise value of an index constituent *i*

This can also be simplified as follows:

$$Lincoln\ PMI_\Delta = \frac{\sum_i EV_{i,t}}{\sum_i EV_{i,t-1}} - 1$$

Simply, this is equal to the aggregate enterprise value of index constituents in a given quarter divided by the aggregate enterprise value of the companies in the prior quarter.

The results are as follows for the period 2014 March 30 through 2024 December 31:

Quarter	Quarterly Change	Lincoln PMI
Q1 '14	NA	10,000
Q2 '14	0.4%	10,044
Q3 '14	2.3%	10,274

(1) Concentration reflects the percent of the Lincoln PMI comprised of the five largest index constituents

Results by Industry

Lincoln repeats its analysis for each industry so as to create industry sub-indices.

Results by Size

Lincoln repeats its analysis for three size categories (-\$5 million to \$20 million, \$20 million to \$50 million, and \$50 million to \$250 million) so as to create industry sub-indices.

Academic Advisors

Professor Steven Kaplan is a Senior Advisor to Lincoln's Valuations and Opinions Group. He is the Neubauer Family Distinguished Service Professor of Entrepreneurship and Finance and Kessenich E.P. Faculty Director at the Polsky Center for Entrepreneurship and Innovation at the University of Chicago Booth School of Business. Among other courses, Professor Kaplan teaches advanced Master of Business Administration and executive courses in entrepreneurial finance and private equity, corporate finance, corporate governance and wealth management. Professor Kaplan conducts research on a wide array of issues in private equity, venture capital, corporate governance, boards of directors, mergers and acquisitions, and corporate finance. He has been a member of the Chicago Booth faculty since 1988.

Professor Kaplan serves on the board of Morningstar and several fund and company advisory boards. He is also a Research Associate at the National Bureau of Economic Research and an Associate Editor of the Journal of Financial Economics. Professor Kaplan received a Bachelor of Arts, summa cum laude, in applied mathematics and economics from Harvard College and earned a Doctor of Philosophy in business economics from Harvard University.

Professor Michael Minnis is a Senior Advisor to Lincoln's Valuations and Opinions Group. He is the Deputy Dean for Faculty and Fuji Bank and Heller Professor of Accounting at the University of Chicago Booth School of Business, where he researches the role of accounting information in allocating investment efficiently by both managers and capital providers. His recent research focuses on understanding the role of privately held companies in the U.S. economy and how these firms use financial reporting to access, deploy, and manage capital. He particularly enjoys identifying unique data and methods to empirically examine issues in a novel way.

In January 2018, Professor Minnis became a member of the Private Company Council, the primary advisory council to the Financial Accounting Standards Board (FASB) on private company issues. Professor Minnis received his Ph.D. from the University of Michigan and his B.S. from the University of Illinois, where he graduated with Highest Honors.

About Lincoln International

Lincoln International is a trusted investment banking advisor to business owners and senior executives of leading private equity firms and public and privately held companies around the world. Our advisory services include mergers and acquisitions, debt advisory, growth equity and restructuring for the mid-market. We also provide valuations and fairness opinions and joint ventures advisory services. As one tightly integrated team of more than 1,000+ professionals across 25 offices in 15 countries, we offer an unobstructed perspective, backed by superb execution and a deep commitment to client success. With extensive industry knowledge and relationships, timely market intelligence and strategic insights, we forge deep, productive client relationships that endure for decades. Connect with us to learn more at www.lincolninternational.com.

VOG is a leading independent valuation advisor to managers of illiquid assets and lenders to alternative assets funds. VOG specializes in the valuation of illiquid debt, equity and derivative securities. Additionally, they provide independent fairness, solvency and other transaction opinions for a variety of corporate transactions for both public and private companies.

VOG is widely recognized for leveraging Lincoln International's "real world" transaction experience from its M&A and debt advisory practices to assist its clients in the determination of fair value. Lincoln International's highly skilled professionals have extensive experience in determining and supporting fair value measurements for traditional and complex securities.

Independent Academic Validation of Lincoln's Data

In January 2024, an Assistant Professor of Finance at Penn State University's Smeal College of Business conducted a study to evaluate the statistical significance of Lincoln's private market Database as compared to other independent sources, like Pitchbook, BDC Collateral, and Preqin. The test was akin to an FDA pharmaceutical drug effectiveness test wherein Lincoln's data was tested in relation to the independent data sets, measuring overlap of deals detailed and congruency of reported terms. The results were robust and concluded that Lincoln's data was representative of the private debt universe, and comprehensive of sponsor backed deals, in particular. Lincoln's Database featured 53% of reported private debt deals with terms in Pitchbook and 48% of sponsor backed deals with reported debt terms that appeared in BDC Collateral. However, beyond the abundance of pure deals, Lincoln's database goes a step beyond and includes vital operating performance figures from the portfolio company level that the other databases don't feature. Lincoln's data is more comprehensive, inclusive of enterprise value and financial performance metrics that allow for a much clearer picture of the state of the private markets.
